Unexpected results

- Complex topologies can become difficult to reason about

- Your own expectations of how the topology should behave can differ from reality

  - Example: KTables do not emit per-aggregation

- TestTopologyDriver's behaviour can differ from real-world cluster…

  - Example: TestTopologyDriver's output does emit per-aggregation

Example: repartitioning

- [KAFKA-8846] JIRA issue

- Repartitioning causes unexpected output

- Without repartitioning, expected output is returned

- TestTopologyDriver returns expected output
